

Illuminable Writing Instrument

Abstract of the Disclosure

An illuminable writing instrument includes a writing unit holder to receive a writing unit, and an illumination arrangement including a light dispersing cone having a
5 cone vertex supported within the writing unit holder, an illuminator supported within the receiving cavity at a position right above the cone vertex of the light dispersing cone, and a control switch arranged to activate the illuminator for providing an illuminating effect towards the cone vertex of the light dispersing cone, such that the light dispersing cone is adapted for vividly dispersing the illuminating effect throughout the writing unit holder.
